Almer Hodžić

Junior Software Engineer / Full-Stack Developer

Goražde, Bosnia and Herzegovina • al1merr248@gmail.com • +387 60 353 9990

Profile

Final-year Software Engineering student with practical product experience from Football Path X, where I contribute to a React/TypeScript administration platform and the services behind it. Working inside an existing product has taught me how features, data and user workflows connect - from implementing functionality to tracing why something breaks and refining it until it feels reliable. Outside that role I build full-stack .NET applications, and I am looking for a junior position where I can keep developing through real product work and increasing responsibility.

Experience

Software Developer Intern — Football Path X (FPX) Nov 2025 – Present

React · TypeScript · Node.js/Fastify · Firebase/Firestore · BigQuery · RediSearch

I contribute to an internal football administration product used by the team to manage clubs, users, matches and reporting. My work has included improving search with RediSearch, developing the map-based club experience and location tools, contributing to match and PDF-report features, and tracing issues across the interface, APIs and data layer. More importantly, the role has taught me how to work within an established codebase, understand an existing product before changing it, and carry a task from investigation to a usable result.

Web Development Intern — FabLab Sarajevo 2023

PHP · HTML · CSS

Worked on multilingual website maintenance, adjusting content, layout, navigation and images while resolving smaller frontend/script issues that affected presentation and usability.

Selected Work

MovieShop — Full-Stack Movie Catalog Personal project

ASP.NET Core · EF Core · SQL Server · Angular · JWT · CQRS · PayPal

Built a full-stack movie platform with authentication, reviews, favourites, cart and payments, notifications and profile management. The backend uses structured API modules, validation, migrations and Swagger documentation, while the Angular admin side covers CRUD workflows, forms and service integration.

NBA Clutch Decision Agent — AI / Reinforcement Learning University project

.NET · C# · Q-Learning · Web API · CSV processing

Created a Q-learning agent that learns whether to shoot or hold in NBA clutch situations from historical shot data, with reward logic, baseline strategies, evaluation metrics and a lightweight web interface for running and reviewing the model.

Background

Education BSc in Software Engineering — Faculty of Information Technologies Mostar, University Džemal Bijedić · Fourth-year student

Working stack React and TypeScript; C# and ASP.NET Core; Node.js/Fastify; SQL and Firebase; Git and API tooling

Languages Bosnian — Native · English — B2 (Upper-Intermediate)
